

# THE GREEN FUTURE OF PARIS

Site Furnishings • Outdoor Fitness

## A SUSTAINABILITY STORY

Paris Site Furnishings and Outdoor Fitness is dedicated to creating lasting impressions with our extensive range of site furnishings. From benches and litter receptacles to bike racks, sports field equipment, planters, and shade furnishings, we offer everything you need to create a memorable site. A great way in doing so is to team up with other sustainable Canadian companies to encourage sustainable practices; we have teamed up with BUM Commercial Outdoor to craft a new outdoor seating collection for A&W Canada. This collection features Canadian-made outdoor furniture that utilizes recycled aluminum for its frames, while the tops and benches are constructed from recycled plastics. We are proud to work with sustainable Canadian companies that share our commitment to environmentally friendly practices.

IN PARTNERSHIP WITH

We understand that community spaces are more than just a spot to gather; they are where memories are born. These are gathering spots for friends and families. Paris Site Furnishings and Outdoor Fitness is committed to providing safe, durable furnishings and amenities that will help make any site unforgettable.

At Paris Site Furnishings and Outdoor Fitness, we are always looking at ways to reduce our carbon footprint and promote a more sustainable environment. We are looking forward to a greener tomorrow, and here is how we're going about it.

### CUTTING EDGE LIGHTING

In our efforts to reduce our carbon footprint, we have installed Smart LED lighting throughout our warehouse.

With motion sensor technology, our smart lighting dims when no one is around, eliminating unnecessary energy consumption. In a year, we have been able to reduce our lighting energy usage by 76%.

Our solution to keeping employees safe in the late hours of the day and maintaining environmental responsibility comes in the form of solar LED lighting. By harnessing the power of the sun, we are able to utilize off-grid lighting to keep our employees safe on our property while still maintaining a low carbon footprint.

### METAL RECYCLING

Steel and non-ferrous metal recycling plays an important role in our sustainability efforts. Recycling metal helps conserve natural resources, reduce greenhouse gas emissions, and decrease energy consumption. Our facility ensures proper disposal of these various materials, dividing the materials before they are collected for recycling.

## A SUSTAINABILITY STORY

### NORTH AMERICAN RAW MATERIALS

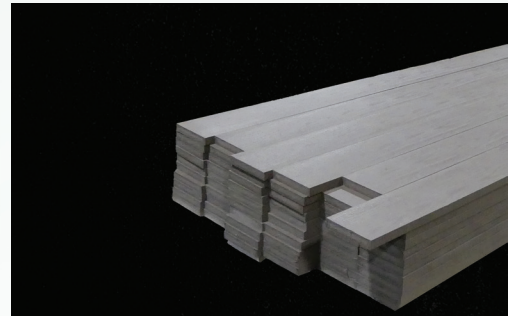

Our materials are sourced from within North America, not only helping to sustain the North American economy, but also aiding in reducing the amount of greenhouse gas used for in transportation of our materials.

### SUSTAINABLE MATERIALS

Many of products include sustainable materials, such as Ipe wood and recycled plastic. The durability of these materials provides years of resistance to rot, mold, decay, and weathering. These factors allow our site furnishing to withstand even the harshest of North American weather. Our site furnishing can be enjoyed for years to come.

### WHAT THE FUTURE HOLDS

We are continuously looking for ways to reduce our carbon footprint and provide green solutions. We are striving to be at the forefront of the initiative, and one way we are leading the way is by incorporating solar energy in our site furnishing. Our latest edition, the Solar Bench, is equipped with a USB-A and USB-C port, allowing for patrons to charge their devices on the go, while using renewable energy.

There is no end to our goal at a greener tomorrow. As the years go on, we will continue to promote a more sustainable world and not only reduce our own carbon footprint, but help others reach their sustainable goals.
